TITLE: Treating infection caused by in-dwelling devices - also similar methods for treating cancers coated with tenascin and treating inflammation with receptor stimulators

INVENTOR: LOIKE, J; SILVERSTEIN, S C

PRIORITY-DATA: 1996US-0635572 (April 22, 1996), 1998US-0177843 (October 22, 1998)

ABSTRACTED-PUB-NO: US 5843436A  
BASIC-ABSTRACT:

A novel method for treating infection caused by bacteria on the surface of an in-dwelling foreign body, over and around which fibrin has been deposited, comprises administration of an agent (I) that inhibits signalling mediated by a beta 1-integrin cell surface receptor (II) on leucocytes. (I) enhances migration of leucocytes in and through the fibrin so that they can reach and kill the bacteria.

ADVANTAGE - Treatment with (I) overcomes the inhibitory effects of fibrin or tenascin on leucocyte migration.
